

CABLE DENSO

With this 1st release , Rabotti S.r.l. inaugurates an information service to all its Customers, pin and support of our equipments' manufacturer activity for the diagnosis and repair of Diesel injection systems.

The purpose of these releases is to update our Customers about news that Rabotti is able to introduce and commercialize, in the attempt to answer, if possible anticipating them, to the demands of a market in continuous renewal and evolution, where now the news follow one another at a fast pace.

In this first number we present 2 new Denso power cables. Historically our supplies were limited to an only kind of cable suitable for the first specimens produced by the Nipponic house , identified with Rabotti code ELECAV121708000 (Figure 1). Subsequently, by request of the US market, we have joined the cable for Denso 4 pin injectors, ELECAV121714000 (Figure 2), going to enrich the available endowment on our equipments.

Figura 2 ELECAV121714000

Today we introduce 2 new kind of cables, ELECAV121718000 (Figura3 - example: 095000-803# / 8-98074909-0 / 9C1Q-9K546-BA / 095000-793# / 095000-706#) and ELECAV121719000 (Figura 4 - esempio 095000-770# / 23670-51020 / 095000-753# / 095000-773# / 095000-561#), both cables with 2 pin, but with a different configuration depending on the type of injector.

This extension of cable's range helps our customers to take benefit of a complete service regarding the tooling of their own test bench, using original Rabotti products, guaranteed by the continuous research and development, by an internal checked production and by the tests made on every single piece produced.

In addition, the cables that we introduce You, are sized and designed for the correct application on the entire production of Rabotti equipments, marrying perfectly with the electrical and electronic layouts of Your nowadays equipments or of the ones which have already years of service behind.
